

IntegraSEAL®

Place our
guaranteed
"Seal of Integrity"
over all your
surfaces

Concrete Remedy Deep Seal

Concrete Remedy Deep Seal is an alkali activated penetrating masonry stabilizer

- Concrete Remedy Deep Seal as a concrete sealant outlasts and outperforms typical surface-type sealers.
- Concrete Remedy Deep Seal NEVER needs to be re-applied – do it once and you NEVER have to reapply the material.
- Concrete Remedy Deep Seal is not a surface sealant, but, an internal concrete stabilizer that stops problems at the source.
- Concrete Remedy Deep Seal contains a proprietary catalyst which “pursues moisture” in concrete and upon contact reacts with the “free” alkali (lime) and calcium hydroxides (already in concrete or masonry) to form a silica gel on the surface of voids and particulate, impregnating the entire depth penetrated. This gel hydrates into a new substance, turning the entire depth penetrated into a solid mass.
- This internal, permanent seal and water barrier also hardens and dust-proofs the surface while increasing the compressive and flexural strength.

**Uncountable applications – Literally everything cementitious!
All concrete should be stabilized with Concrete Remedy Deep Seal.**

- Every Coating – rubberized, paint, polyurea, epoxy, surface sealers – products applied to concrete will perform better if the concrete has been stabilized and hardened with Concrete Remedy Deep Seal.
- Above, below or on grade as a slab hardener, dust-proofing, and/or waterproofing agent.
- Shot Crete, Stucco, Mortar

BOTTOM LINE : CONCRETE REMEDY STOPS DETERIORATION “DEAD IN ITS TRACKS”

Advantages:

- Concrete Remedy Deep Seal works internally and solves the problem at the real source.
- Concrete Remedy Deep Seal becomes an internal part of the concrete and **NEVER needs to be reapplied**...thus it is extremely cost beneficial...especially compared to the majority of sealers which need to be reapplied often.
- Concrete Remedy Deep Seal is non-toxic and has NO odor – easy & safe to apply.
- Concrete Remedy Deep Seal does not alter or affect the color or texture of the treated surface.
- Concrete Remedy Deep Seal permanently waterproofs (holding a hydrostatic head) which retards penetration of grease, oils and acids.
- Concrete Remedy Deep Seal increases bonding of any top coating (including paint, mastics, etc...)
- Concrete Remedy Deep Seal retards pitting, dusting, and rutting.
- Concrete Remedy Deep Seal cures new concrete uniformly and resists hair checking and spot drying.
- Concrete Remedy Deep Seal permanently densifies and hardens all concrete, greatly extending the life of treated surfaces by reducing or eliminating wear due to abrasion, freeze-thaw and salt attack.
- Concrete Remedy Deep Seal enables easier removal of snow and ice.
- Concrete Remedy Deep Seal can be painted over, and will accept concrete topping or mastics for floor tile, etc...
